Inkscape - getting started

Inkscape is free software for drawing vector graphics. It can be loaded from AppsAnywhere on a university PC or [installed on your own machine](#).

For AppsAnywhere, search "Inkscape".

If Inkscape doesn't load, search for it in the Start Menu.

Once Inkscape is open, go to the Help menu at the top and find Tutorials. Open 'Inkscape: Basic' and work through it.

This opens the tutorial as an Inkscape document, so when it asks you to select and move a shape you can actually do it.

Work through as many of these as you would like, but especially please try to complete 'Basic' and 'Shapes'.

Once you have the idea, have a play and see what you can draw!
